**WORLD ECONOMIC OUTLOOK UPDATE • JULY 2015**

### ANNUAL GROWTH RATES

One-off events hampered first-quarter activity in North America, resulting in a slight downgrade in growth projections for 2015.

| Year | Global Economy | Advanced Economies | Emerging Market & Developing Economies |
|------|----------------|--------------------|--|
| 2013 | 3.4            | 1.4                | 5.0                                    |
| 2014 | 3.4            | 1.8                | 4.6                                    |
| 2015 | 3.3            | 2.1                | 4.2                                    |
| 2016 | 3.8            | 2.4                | 4.7                                    |

### RISKS TO GROWTH

Lower oil prices may still boost growth in advanced economies, but downside risks persist.

**NEAR-TERM RISKS:**

- Increase in financial market volatility, including from Greece
- Economic distress from geopolitical factors

**MEDIUM-TERM RISKS:**

- Advanced economies not reaching full employment
- Lower commodity prices undermining growth in low-income countries
- Further U.S. dollar appreciation creating balance sheet challenges for dollar debtors
- Sharper-than-expected slowdown in China

### POLICY PRIORITIES

More can be done to ensure the projected pickup in global growth materializes:

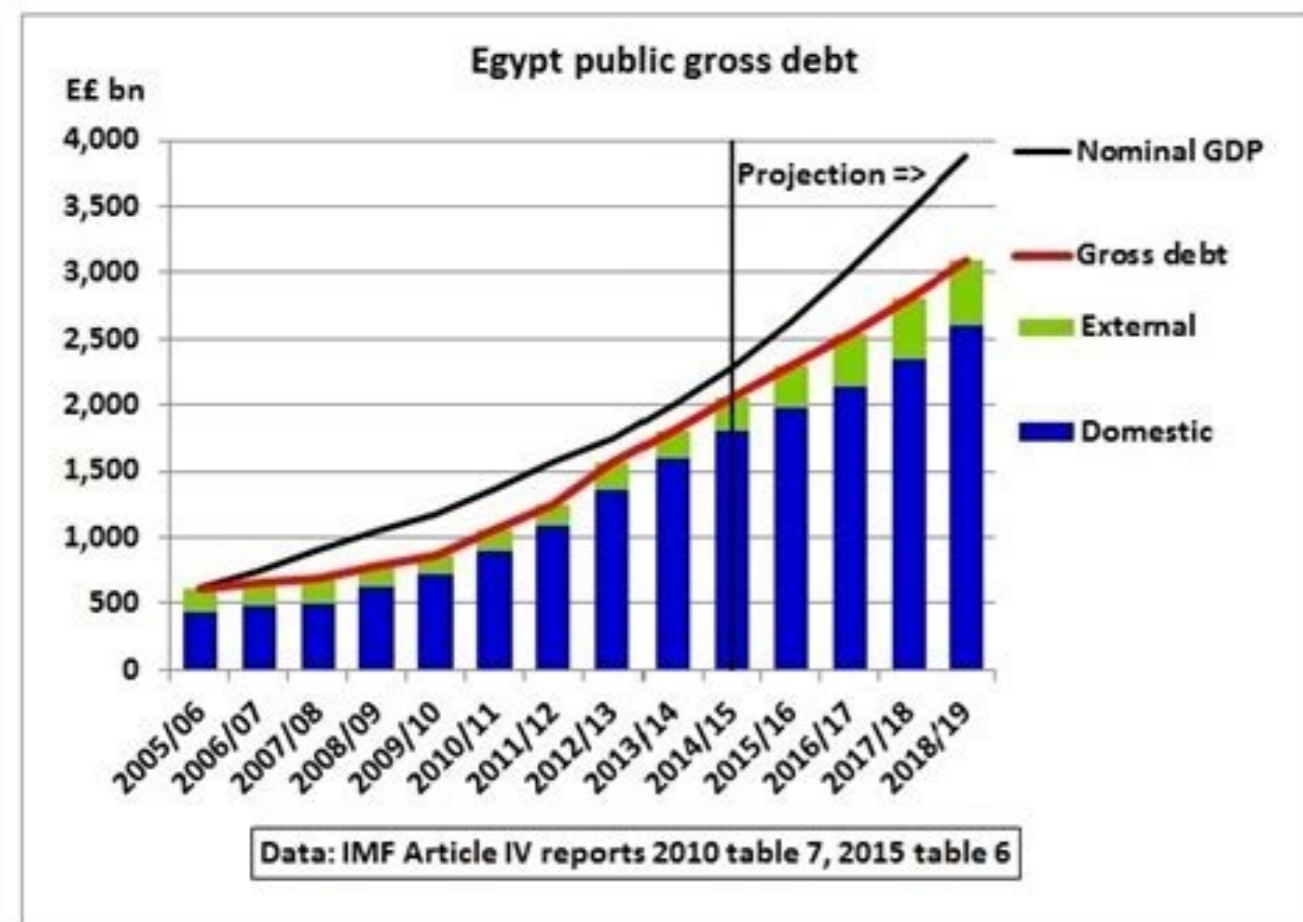

**ADVANCED ECONOMIES:**

- Continue accommodative monetary policies.
- Countries with fiscal space should increase infrastructure investment.
- Countries with high debt should aim for debt-reduction policies that minimize the drag on economic activity.
- Adopt structural reforms.

**EMERGING MARKET AND DEVELOPING ECONOMIES:**

- Support demand through tax reform and spending reprioritization.
- Adopt structural reforms to raise productivity and remove production bottlenecks.

Current account ficit, on the other hand, is designed to grow gradually as economical recovery strengthens.figure 19.Sr savings: Current account balance, 2015 and 2020 projection o (percentage of GDP) quotation: policies of 2016, 005; 10.5089 / 9781498345545.007.A001Sources: Economic perspectives of the world. Commodity importers include Costa Rica, Guatemala, Hungary, India, IndonA © Sia, Pakistan, Philippines, Poland, Thailand, Turkey, Uruguay. Figure. The main systems (China, Japan, U.S. and U.k) have recorded improvements in their general policy gaps during the year 2015, with fiscal consolidation playing a role in Japan in U.S. and U.k. However, these reduced policy gaps do not translate into a narrowing of imbalances in all cases, highlighting the role of other underlying impediments (not identified by the model) to the external adjustment. Other emerging market currencies were especially volatile, floating with commodity prices and global risk aversion. In the case of EMS, the balances of current accounts and the canic rates also reflect a tightness in the external financial conditions. Since 2015, coins have been subject to large fluctuations - including following U.K. Referendum,particularly worthy of note has been the appreciation of the yen, which after the weakening since the end of 2011 (35% in real terms), strengthened levels (about 15% to June 2016) in relation The 2015, reflecting the revised market perceptions on monetary policy in Japan vis-a-vis other reserve currencies as well as safe flows. Bands with small lace shocks (less, 0.01% of the world's GDP) are excluded.2 / classification in commodity exporter / importer based on the direction of-trade terms Movement in 2015.Download FigureNoads- Windfalls of commercial income and global imbalances, 2015 1 / 2016, 005 polic documents; 005; IMF International Financial Statistical, Weo and IMF Personnel Chrucas / Methodologic Detachments provided in Appores I. For U.S., this means that the normalization of monetary policy should only gradually and, according to with the rhythm of recovery. Figure 11. Redevelop FigureOnWLoad Figure as PowerPoint Slide14. A simple comparison, however, indicates that the current conditions are different from those predominant in 1985.With in 2015, CA balances in U.S. And in Japan they reached similar levels in relation to the GDP of those observed in 1985, the current levels are significantly lower in relation to the degree of openness of these economies and much less concentrated. The euro area checking gap has become more positive, but it is not enough to change the Qualitative Assessment of Consistence. " In contrast, the improvement in the underlying current account of the Japan has moved its external evaluation to a €<sup>™</sup> – "moderately stronger. AE Exclude uses, GBR, JPN, and the countries; EMES exclude CHN, Sau, Rus. While in some cases (Africa South), the recent depreciation seems consistent with a narrowing of external gaps, in others (coréalia, (coréalia, Thailand) The weakening of the currency suggests a movement in the opposite direction.24. Although there is some evidence of balance effects still restricting its role of buffer (Box 5), à € à €
